EDUCATION

Wilfrid Laurier University

Bachelor of Science in Computer Science

Waterloo, Ontario

Sep. 2023 – Aug. 2027

- **Clubs:** Laurier Computing Society
- **Related Credits:** Data Structures 1 and 2, Object Oriented Programming, Algorithm Design & Analysis, Discrete Mathematics, Linear Algebra,

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, HTML/CSS

Frameworks & Libraries: Next.js, Spring Boot, Tailwind CSS, Node.js, Express, React, scikit-learn, pandas, XGBoost, BeautifulSoup, Streamlit, Altair, Jest, GSAP, Three.js, EJS

Developer Tools: Docker, Git, GitHub, npm, Maven, VS Code, Jupyter Notebook, PostgreSQL

PROJECTS

🐙 NBA Match Predictor | *ML Web Application* | *Python, scikit-learn, XGBoost, Streamlit*

- Developed an end-to-end **Python** ML pipeline automating data collection and feature engineering across **a decade of NBA data**, generating **400+ features**
- Trained and backtested a **Ridge Classifier** and **XGBoost** model using walk-forward validation, achieving **66% prediction accuracy**
- Automated live data collection via **web scraping (BeautifulSoup)** from Basketball Reference for real-time prediction updates
- Deployed an interactive **Streamlit** dashboard with live accuracy tracking and team-filtered performance visualizations

🐙 ThunderBear Inventory | *Full Stack Web Application* | *Node.js, Express, PostgreSQL, Jest*

- Developed a full-stack inventory system using **Node.js, Express, and PostgreSQL**, enabling gym staff to track stock across multiple categories
- Engineered **inline bulk-editing** functionality allowing staff to update item names, categories, and stock counts on one page in a single save
- Implemented **MVC architecture** and **parameterized SQL queries** to prevent SQL injection and enforce data integrity across CRUD operations

🐙 Battleship | *Web Application* | *JavaScript, HTML5, CSS*

- Built a browser-based Battleship game in **vanilla JavaScript** featuring **PvP** and **Player vs Computer** modes
- Engineered a **hunt-and-target algorithm** that switches between random search and targeted attacks after a hit
- Applied **event-driven design** and class-based OOP architecture with a **drag-and-drop** ship placement interface

WORK EXPERIENCE

AI Solution Engineer – Three Stripes Digital

May 2026 – Present

Internship

Remote

- Contributed to **AI model training** workflows by preparing and refining training data and iterating on **50+ prompt variations**, improving output accuracy and consistency across client-facing tools
- Researched and qualified **300+ prospective leads** using AI-powered research tools, building targeted prospect lists that supported the sales pipeline
- Identified and implemented AI-driven workflow improvements that cut manual research time by roughly **40%**, allowing the team to focus on higher-value outreach
- Collaborated with sales and delivery teams to translate client needs into practical AI solutions, contributing to **3+ client-facing projects**

Data Entry Clerk – SDM Consulting

Jun. 2024 – Sep. 2024

Consulting Firm

Toronto, Ontario

- Maintained internal databases with high accuracy, verifying data integrity by cross-referencing entries against source documents
